Visual & Electronic Tags
Handling & Tagging Instructions

1. Load female first
   Secure tag below clip

2. Load male second
   Push onto pin firmly

3. Insert tag between two cartilage ribs
   Close applicator fully
   Audible click is heard!

4. Open applicator fully to release tag

Important tagging information

Always ensure that the female part of the tag is inside the ear

- Reduces the chance of the tag snagging or catching

When tagging animal from the front use the hole in female jaw of applicator as a target

- Straight-line applicator action drives male & female precisely together
- Eliminates using male point to locate tag correctly in ear

Insert the tag between the two cartilage ribs.

- Recommended position

Apply tags under hygienic conditions

- Operator hands, the ear, the tag and the applicator should be clean
- Disinfect as necessary using an appropriate solution
- Fit in cool weather (where possible) to minimise infections
- Store unused tags in clean dry container

Check the ear after about 10 days for signs of infection

- Consult your veterinary surgeon as necessary

Always use correct applicator

Use Combo Strips

- Speeds up tagging
- Avoids inserting non-matching tags
