Other comments:	An extra charge for uploading to English database may be incurred. An additional charge for sending results by post may also be incurred (email is preferred)		LGC supports both the Scottish BVD Eradication programme and the BVDFree England Scheme. Samples can be accepted from any source provided we have them set up as a customer on our system. Positive and suspect samples are only reported as such after having undergone additional testing in the laboratory to ensure that the correct results are reported to the customer as we are aware of the implication to the farmer if a positive result is received.		All results reviewed and interpreted by vet. Veterinary interpretation is ISO17025 accredited too. CHeCS licensee
